Health care clinics around the country provide outstanding treatment for numerous diseases. However, despite miraculous treatments, our health care cost continue to rise and people continue to die from heart disease, cancer, lung disease, and stroke. The irony is that the majority of these conditions are preventable.

Dr. Wright sees the value of preventative care. He believes that true health care reform starts with our-selves. We have to start taking responsibility of our health and stop doing things to our bodies that will ultimately hurt it. We can no longer abuse our bodies with unhealthy foods and slothful activities and expect a doctor to fix it all of up (for a cheep price).

Dr. Wright has designed a program for medical clinics of any size to help them help their patients make better life style (food and exercise) choices. This program will give the employees the knowledge and motivation to "Inspire Health." We as a health care community must lead by example. If you or the clinic you work for is interested in inspiring your patients to live longer, stronger, healthier and happier live, sign up now to start a "Wright Choice " program at your clinic.
